GENERAL CATALOGUE

 **Benelli**

**INERTIA DRIVEN
SYSTEM**

Essential design, simple construction and mechanical precision guarantee maximum strength and reliability.

The innovative progressive recoil absorption system kicks in gradually according to cartridge loading. This is the true essence of comfort in wood, an invisible, yet highly sensitive system.

In-Line Inertia Driven System features a shorter bolt head. The shutter cycle takes place in axis with the barrel for a perfect distribution of forces, impeccable balance and minimization of muzzle climb.

ComfortTech 3 is the most efficient Full Comfort system in the world. With its improved geometry, ComfortTech 3 significantly reduces the perception of recoil. The re-target is faster and control is optimised in each phase to ensure total comfort for the user.

The gas recovery ARGO E SYSTEM has been revamped in terms of construction geometry, materials and movements. The new piston guarantees perfect operation and the new components made of special material are resistant to corrosion.

The ComfortTech Plus System on Vinci and Super Vinci reduces barrel detection and accelerates target recovery.

The Gas Operated ARGO E SYSTEM mechanism is synonymous with reliability, resistance and safety, it ensures shooting accuracy and durability – tested and approved by the Marines.

The Comfortech System is the patent that can offer superior shooting performance in terms of reducing recoil, muzzle climb, alignment and better target acquisition on the following shot.

The patented locking system consists of a plate that perfectly seals the single-piece unit. The steel locking system is durable and guarantees the elimination of any mechanical stress on the receiver.

Benelli's technological evolution has generated the new CombTech comb to reduce the impact on your face. The combination of an elastic structure with an ergonomic system capable of adapting to the shape of your cheekbone and returning instantly to the original position absorbs the impact on your cheek.

The SpeedBolt system is characterised by a bolt that features a tungsten insert: this makes the cycle faster and the shotgun easier to handle, with less recoil leading to less uplift.

Progressive Balancing is the patent Benelli that allows to adjust the firearm's barycenter position simply and precisely.

Possibility to choose between 40 different combinations of drop and cast for a natural and instinctive aiming.

The exclusive dispensing system, unrivalled in distances between 10 and 20 meters, guarantees a broader and more densely pattern.

Benelli Surface Treatment makes the barrel extremely hard and adds precious beauty and resistance to corrosion, without the need for maintenance with protective oil. Unlike the current coatings on the market that get scratched and become susceptible to rust, the BE.S.T. Technology ensures total protection of the barrel.

Selected walnut wood embellished by the exclusive "Wood Touch" checkering with a triangle pattern guarantees secure grip under all conditions.

The Power Bore cryogenic barrel with selected bore and very small diameters ensures greater speed and target penetration. Power Bore Crio: the ideal bore for a perfect hit and to be sure you'll never miss the target.

The specific and special treatment that guarantees tough resistance to the most adverse climatic conditions and makes the wood more brilliant.

Cryogenic treatment ensures superior ballistic performance thanks to the vibration and expansion of the barrel evenly on firing. The pattern provided by a cryogenic barrel is wider, more regular and more uniform.

Technology that enhances and emphasises the wood grain, lending a shiny refined look to stock and fore-end.

The barrel forms a single unit with the receiver cover and operates coaxially to the new Vinci Inertia Bolt System. Perfect balance for unprecedented accuracy.

A new generation checkering that thanks to the aerodynamics of the small spheres ensures superior grip and allows for quick shouldering for a firm, effective and comfortable grip.

The new carbon fibre rib has been restyled and now features a sight that accommodates a high-brightness optical fibre.

This patented system allows you to see all cartridges present in the magazine through a slot in the lower section of the fore-end. The advantages in terms of safety and functionality are considerable. A bright red signal indicates that the firearm is loaded.

BE.S.T.

BENELLI SURFACE TREATMENT

Benelli Surface Treatment is the exclusive Full Protection treatment that gives the barrel and main components superior resistance to corrosion, abrasion and wear.

BE.S.T. Treatment, protected by industrial secret, acts on the molecular structure of metal surfaces through the deposition of carbon and

ensures the barrel greater resistance to scratches and abrasions, limiting to a minimum the need for maintenance.

**The beauty and elegance
of absolute black**

The outstanding qualities of the BE.S.T. treatment give the barrel a timeless beauty.
