Conveying and Storage Systems*

ABOUT US

Elevatorsan® has worldwide experience in manufacturing grain processing and enhancement equipment and almost all type of food and industrial conveying and storage systems.

We are honored to say that we have a number of solution for conveying and Storage Systems and Especially almost all seed processing and cleaning process with packaging works.

Our new model universal systems are used to clean the all type of grain products from foreign substances such as small stones, dust, dirt and broken or immature products. Also, Our technological last version sorting machines can classify your products in weight, size even in color. After these all conveying and processing steps, we are ending with our packaging and bagging machines.

Elevatorsan® machinery systems are classified as mechanical or computer controlled. Our aim is to offer alternative solutions for conveying and processing problem to the customer's budget. In addition, all our machinery systems can be design and product according to your capacity and compatibility request.

SEED PROCESSING SOLUTIONS

We have unlimited technological solutions in every steps of Processing for any type of harvested seed and Grain from field to consumers. Seed Grading, Pre cleaning, Stone Separators, De-awner machine, Gravity Separator and Grain Separators. On special request, We can produce customized standard and available capacity according to the type of product.

PACKAGING AND BAGGING SOLUTIONS

**PACKAGING MACHINE WITH MULTI
HEAD WEIGHER**

Suitable for granule type of products. The weighing unit is controlled by a separate microprocessor and touch screen. Supports many usefull functions such as multi dumping, automatic product conveyor control, self cleaning, recipe record for different products, different language and etc. Different amount of weighing buckets in different dimensions should be provided with respect to type of product. Parts touching to products

**SINGLE WEIGHING & BAGGING
SYSTEM**

Bagging system is used for weighing and bagging the product from 2 kg to 50 kg bags. Bags or sacks are feed into the machine by an operator. Optional automated bag feeder is available on request. The aim of this machine increases the productivity and quality, decrease labor. We can produce customized standard and available capacity according to the type of product.

BUCKET ELEVATORS

This machine is necessary for both vertical and diagonal transportation of all food and industrial type of powder or grain products. It is commonly used to convey friable and fragile materials and minimize product degradation or damage. On special request, We can produce customized standard and available capacity according to the type of product. There are both fixed and portable models of the machine.

BELT CONVEYORS

Belt conveyors, manufactured according to the requirements of the process can be either in stainless steel or carbon steel with coating. Different sizes and inclinations are applicable. Screw conveyor is one of the simplest and oldest handling equipment for bulk materials. It can be also used to control the flow of bulk materials in many chemical processing and storage operations.
