

Kögel Light^{plus}

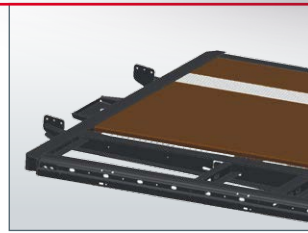

Weight

- The low tare weight of the lightweight semi-trailer allows a high payload
- Low tare weight starting at 4,775 kilograms with individual equipment and 5,145 kilograms in its standard version

New frame in a lightweight design

- Chassis frame made of lightweight steel
- Frame neck height of 120 millimetres
- Thanks to a full-width cross beam, the payload is optimally and evenly distributed across the loading platform and internal height is increased at the same time

Floor

- 30-millimetre screwed panel floor
- Alternatively, a 27-millimetre-thick panel floor is also available

VarioFix perforated steel external frame

- Short distances between slots ensures that cargo can be securely fastened in virtually any part of the lightweight semi-trailer
- A perfect lashing angle prevents abrasion of the tension straps

Lightweight options

Weight-reducing aluminium equipment

Wheel rims

Landing gear

Air tank

Roof tarpaulin bow

Honeycomb doors
