

Concept

Mastek's panbuster/subsoiler eliminates compaction on grassland and on stubble fields. The machine has spring-loaded discs that cut a neat slot through the sod and then it lifts the soil structure evenly across the width of the machine with minimal soil disruption. Each leg has an independent hydraulic break-away which minimizes stress and prevents stones from rising to the surface. It has a smooth roller with hydraulic depth control, which closes the slot for a perfect finish.

After fields are panbusted/subsoiled, the customer will notice much better drainage and increased grass growth. Research shows a 20% increase in dry matter in fields after panbusting/subsoiling results in substantial savings in fertiliser costs.

Technical Data

- › 4 and 5 leg
- › Heavy duty galvanised frame as standard
- › Heavy duty headstock and main frame
- › Hydraulic retractable roller
- › Hydraulic depth control
- › Spring loaded front disc
- › Adjustable hydraulic break back on each leg
- › Replaceable front shins
- › Replaceable points
- › All moving parts are greaseable

Optional Extras

- › Choice of tips
- › Choice of legs
