

Talbro's Engineering Limited

<https://www.indiamart.com/talbroengineering/>

Manufacturer and exporter of rubberized cork transformer kits, transmission rubber cork gaskets, engine gaskets etc.

About Us

Talbro Engineering Limited started making axle shafts in 1980. From humble beginnings the scale has moved to 5,000 axle shafts per day. Unlike other manufacturers who also make axle shafts, we only make axle shafts.

Conveniently located around 30 kms from the heart of New Delhi the facilities are spread across 2,00,000 square feet at three manufacturing locations in the state of Haryana. The factories are integrated and by themselves each is complete and stand alone. All manufacturing facilities of forging, heat treatment, CNC turning, spline cutting, and induction hardening are available at all locations under one roof.

90% of all axle shafts made by Talbro are used by Original Equipment Manufacturers (OEMs) or Tier 1 suppliers. It is enough to let our customers say what they think of us through their PPM feedback.

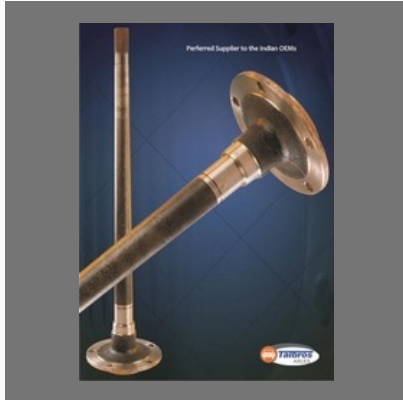

Over the years Talbro has created a huge inventory bank of forging, cutting tools, jigs and fixtures, so much so that new product sample development can be completed within 4-6 weeks, generally at no tooling cost to the customer. Contact us immediately with the part numbers of interest to you.
